

# Radio remote control TRX DSR300M

Radio remote control TRX is the perfect solution for transferring two-way radio functions over short distances.

Moreover, the DSR300M Remote Control is the only product of its kind on the market that allows you to connect up to 4 manipulators to a single radio (full front panel with display).

The device also features power supply voltage monitoring. A message displayed on the keypad screen informs the user when the permissible power supply voltage level has been exceeded.

## Technical data:

- Connection - 8 wire ethernet cable - 4 twisted pair
- Up to around 70m power supply is provided from radio module. For distances over 70m external 12V DC power supply is used. Distances may be different on low quality cables.
- Maximal distance between radio module and control head - 300m
- RJ-45 connector for data transmission, RJ-11 - voice recorder
- Small device form factor. Fits original PMLN6404A enclosure (included).
- Power supply monitoring with onscreen information.
- With external 12V power supply every control head have individual volume control
- In case of connection break, device automatically returns to normal functionality.
- Device does not support USB transmission (keypad microphone and front accessory connector programming cable would not work)
